r3d and lighting renderers and the newest game engine in the Counter-Strike series, Counter-Strike: Source will create the most realistic graphics ever possible in a first person shooter. Features:-

- New Game Engine - The most advanced technology to date brings high-resolution models, lighting, shaders, environment maps, shadows, reflections and refraction effects to the field of battle.
- Advanced Physics and Rendering - The engine uses a ray-tracing system to provide the most realistic and lifelike visuals in a first person shooter.
- Dynamic Weapon Variation - Each weapon has its own unique look and feel, and each weapon's look and feel can be dynamically changed on the fly using a unique technology called weapon models. Weapon models are true 3D objects that can be attached to a weapon and moved to precisely duplicate the weapon's original appearance.
- Maps - 50 unique maps are included with Counter-Strike: Source, each with its own distinct characteristics and layout.
- New maps - The 'Marina' map is designed to have an almost realistic feel, with streets, buildings, and walkways.
- Realism - The new 'no-crosshair' model will make each player feel like they are really in the action, even if they are using a mouse and keyboard.
- Teamplay - New 'Counter-Terrorist' mode puts the focus on the Counter-Terrorist team, and the new 'Attack-Defend' mode adds even more tactical depth and a strategic element to each team's actions.
- In game options - Adjust the graphics to best suit your needs, or use the in-game options to change the levels of control you have over the game settings.
